

SAP Consulting & Project Management

SAP transformations can be complex, risky and often present unexpected challenges for organisations. A lack of strategy, limited resources, dependence on implementation partners and unclear architecture decisions often lead to delays and risks.

We know the challenges of SAP projects very well and are therefore able to manage projects in a targeted manner and accompany them successfully. With proven methods, in-depth expertise and a practice-orientated approach, we bring structure and strategy to the chaos and keep your back free.

The biggest challenges in SAP projects

High demands on the strategy

The introduction of new SAP technologies requires a clear strategic orientation to optimally support business processes and secure investments in the long term.

Sophisticated architecture & realisation

A scalable and integrable SAP architecture is essential for a successful implementation, which must be ensured through efficient project management, thorough testing and high user acceptance.

Complexity of new technologies

The rapid development of SAP technologies places high demands on adaptability, integration and continuous innovation management.

Dependence on partners

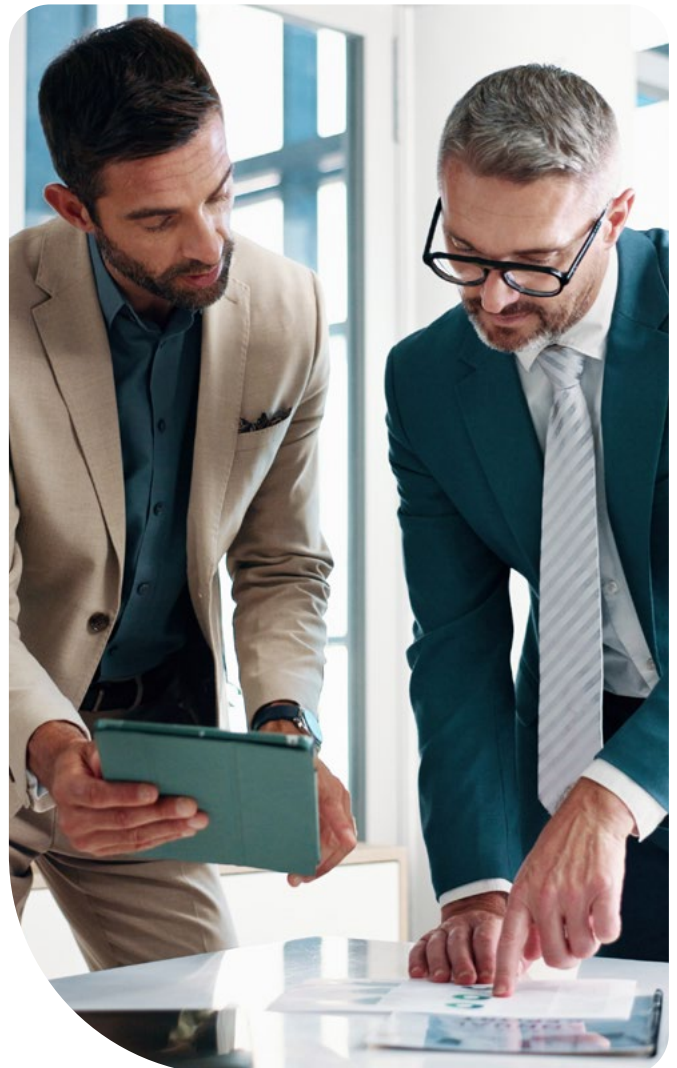

Without neutral quality assurance, there is a lack of controls and transparency – companies run the risk of accepting poor solutions.

Lack of change management

Newly introduced technical solutions often fail in companies due to a lack of acceptance on the part of employees – without change management and appropriate support for the transformation, the hoped-for change cannot materialise.

Lack of resources

Capacity bottlenecks and a shortage of qualified specialists make it difficult to implement new SAP technologies and lead to longer project runtimes and therefore higher costs.

Our solutions for your SAP projects

Successful SAP projects require more than just technology. With a clear plan, independent quality assurance and strategic management, we keep your project on track – from start to finish.

1. SAP Project Management & PMO

Successful SAP projects need clear structures and professional management. We take over project management for you and ensure that everything runs smoothly – from planning to completion.

- ✓ Experienced project managers & PMO experts
- ✓ Governance & control of large SAP programmes
- ✓ Efficient methods such as SAP Activate

2. Change Management & Acceptance Assurance

A new system brings change – but without acceptance, there will be no success. We help you to manage change processes strategically and take employees along on the path of transformation from the very beginning.

- ✓ Strategy for communication & acceptance
- ✓ Training & change roadmaps
- ✓ Stakeholder involvement

3. Quality Assurance & Review of SAP Projects

An independent view ensures success: we identify risks at an early stage, optimise your project approach and ensure reliable quality assurance.

- ✓ Neutral evaluation of SAP architecture & concepts
- ✓ Review of transformation strategies
- ✓ Quality assurance & test management

4. SAP IT Strategy & Architecture Consulting

Which SAP landscape fits your corporate strategy in the long term? We help you to optimise costs and develop a future-proof architecture.

- ✓ Development of a sustainable IT strategy
- ✓ Evaluation & optimisation of existing SAP architectures
- ✓ Identification of cost drivers & potential savings

5. Evaluation of SAP Cloud Models & S/4HANA Transformations

Choosing the right operating model is crucial: we analyse cloud and on-premise options and help you develop the best strategy for your company.

- ✓ Analysing the best operating models for your company
- ✓ Evaluation of cloud and hybrid approaches
- ✓ Development of a customised roadmap

6. Data Privacy & Compliance

Data protection and compliance are crucial for the secure operation of your SAP systems. We support you in minimising risks and meeting legal requirements.

- ✓ Checking compliance with data protection guidelines
- ✓ Risk minimisation for data migrations
- ✓ Advice on secure SAP authorisation models

7. Digital Adoption Services with WalkMe

With WalkMe, we optimise digital adoption and increase the efficiency of your software investments. The WalkMe platform reduces training costs, minimises support costs and accelerates the digital transformation in your company.

- ✓ Conception and design of customised WalkMe solutions with relevant user journeys and use cases
- ✓ Continuous adoption & analytics: analyse process data in depth

Less risk – more control.

- With the support of our team of specialists at GT Germany, we help you to maintain an overview – with a clear strategy, structured project management and independent quality assurance.
- As your partner for SAP project management, change management and IT strategy consulting, we ensure that your SAP projects are implemented efficiently, with low risk and in line with your business objectives.
