

# Understanding and improving your cyber resilience together

In today's digital world, cyber resilience is critical for all organisations, regardless of size.

Cyber attacks are becoming increasingly sophisticated and the impact of a cyber incident can be devastating. It is therefore essential to invest in a robust cyber security solution that gives your organisation insight and protects against the latest threats.

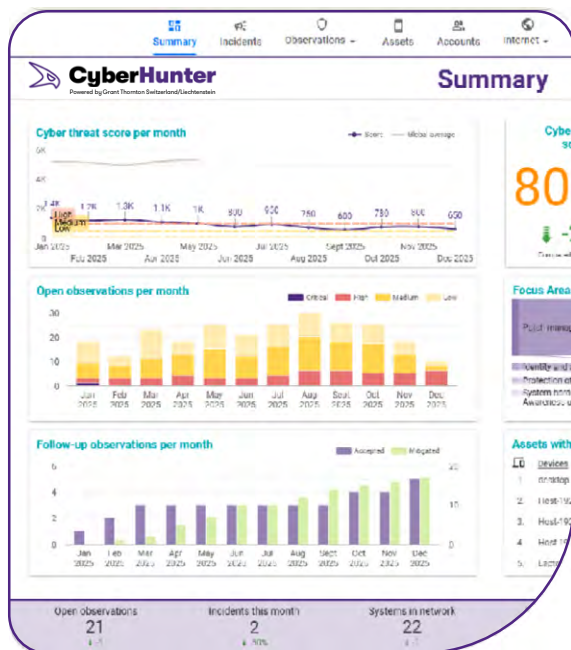

You recognise this, don't you? As an entrepreneur or IT manager, you carry the heavy burden of being responsible for cyber security. Threats are evolving at lightning speed and it is quite a task to keep up with your organisation, to bring the level of protection up to the required standard, and keep it there, let alone to get the basics right. And with that jumble of solutions, sometimes you can no longer see the wood for the trees.

Imagine: you are in control of your cyber security. You know exactly which devices, users, and data you have, where the vulnerabilities are and how to fix them. You are not only protected against attacks, but also future-proof, with a flexible and scalable solution that grows with your organisation.

## How do we help you?

That is CyberHunter's strength. CyberHunter combines technology and human expertise to take an organisation's cyber resilience to the next level. We help you meet today's cyber security requirements, but also to be prepared for tomorrow's challenges and legislation. Whether you want to strengthen your basic security, understand your vulnerabilities or increase your cyber resilience, CyberHunter offers the technology and expertise you need. We do this by:

- Monitoring your IT environment 24/7: Our experts constantly keep their eyes peeled, detecting suspicious activity and taking action if necessary to stop an attack.
- Detecting vulnerabilities: We identify vulnerabilities in systems, networks, accounts and cloud environments and furnish advice on appropriate actions.
- Responding quickly to incidents: Should something adverse happen after all, we will help limit the damage.
- Advising you on cyber security: We are keen to share our knowledge and expertise with you, so you can make the right choices.

## What do we offer?

Far from being merely a collection of tools, CyberHunter is a cyber security partner that protects and strengthens your organisation in the dynamic landscape of cyber threats. Together with our partner firm in the Netherlands, we provide not only all the technology you need, but also the expertise and insight to take your cyber resilience to the next level:

- **24/7 Managed Detection and Response (MDR):** Proactive monitoring and response to cyber threats.
- **Endpoint Detection and Response (EDR):** Advanced protection of all your endpoints (laptops, desktops, servers).
- **Security Information and Event Management (SIEM):** Centralised logging and analysis of security events.
- **Vulnerability Management:** Identify and mitigate vulnerabilities in your systems.
- **Cyber Threat Intelligence (CTI):** Up-to-date information on the latest cyber threats.
- **A user-friendly dashboard:** For insight into your security status and the measures taken.
- **Constructive periodic advice:** We will work together to boost your cyber resilience.

CyberHunter is part of Grant Thornton Switzerland's broader Cyber Risk Services offering, supporting organisations across the full cybersecurity lifecycle - from compliance and training to threat detection, response, and resilience. Developed and successfully deployed by our partner firm in the Netherlands, CyberHunter brings proven, field-tested expertise to the Swiss market as a fully managed cybersecurity solution.
